

QA MANAGER

A **cloud-based system** for broadcasters and language service providers to manage their **QA workflows**

KEEP TRACK OF ALL YOUR QA WORK

Broadcast operations typically involve the QC of hundreds of files on a daily basis to ensure the right asset gets broadcast with the right video. OOONA's QA platform manages the quality assurance process of any type of asset, be it video, audio, subtitle file or other. QA Manager provides a streamlined solution for those seeking to automate and scale traditional, labor intensive and time-consuming QA workflows.

CUSTOMIZE YOUR QA WORKFLOWS

OOONA's QA Manager is aligned with the company's philosophy of user customization, so all descriptive fields in the tool are fully customizable to suit each customer's needs. The content for QA can be populated manually or via the simple import of an Excel file.

BENEFITS

Manage the QA process for any type of asset

Online access from any computer, any time, any OS

Fully customizable

Built-in team communication tools

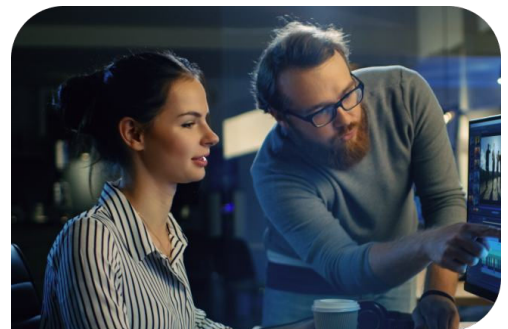

Real-time dashboards

Centralized Information

HOW DOES IT WORK?

After logging a piece of content for QC, a ticket can be raised including the issue type, source and description, as well as notes on its severity and other relevant data to identify the exact location and origin of the error or problem. The system also includes intuitive controls for collaboration among team members who work on fixing errors flagged until an asset is greenlit.
